

# By Scarlett French

## Sensors

The sensors will alarm the drones that there is an oil spill. They will also send an alert to the captain so he knows to.

## Containers

Containers are what we are trying to stop falling off ships.

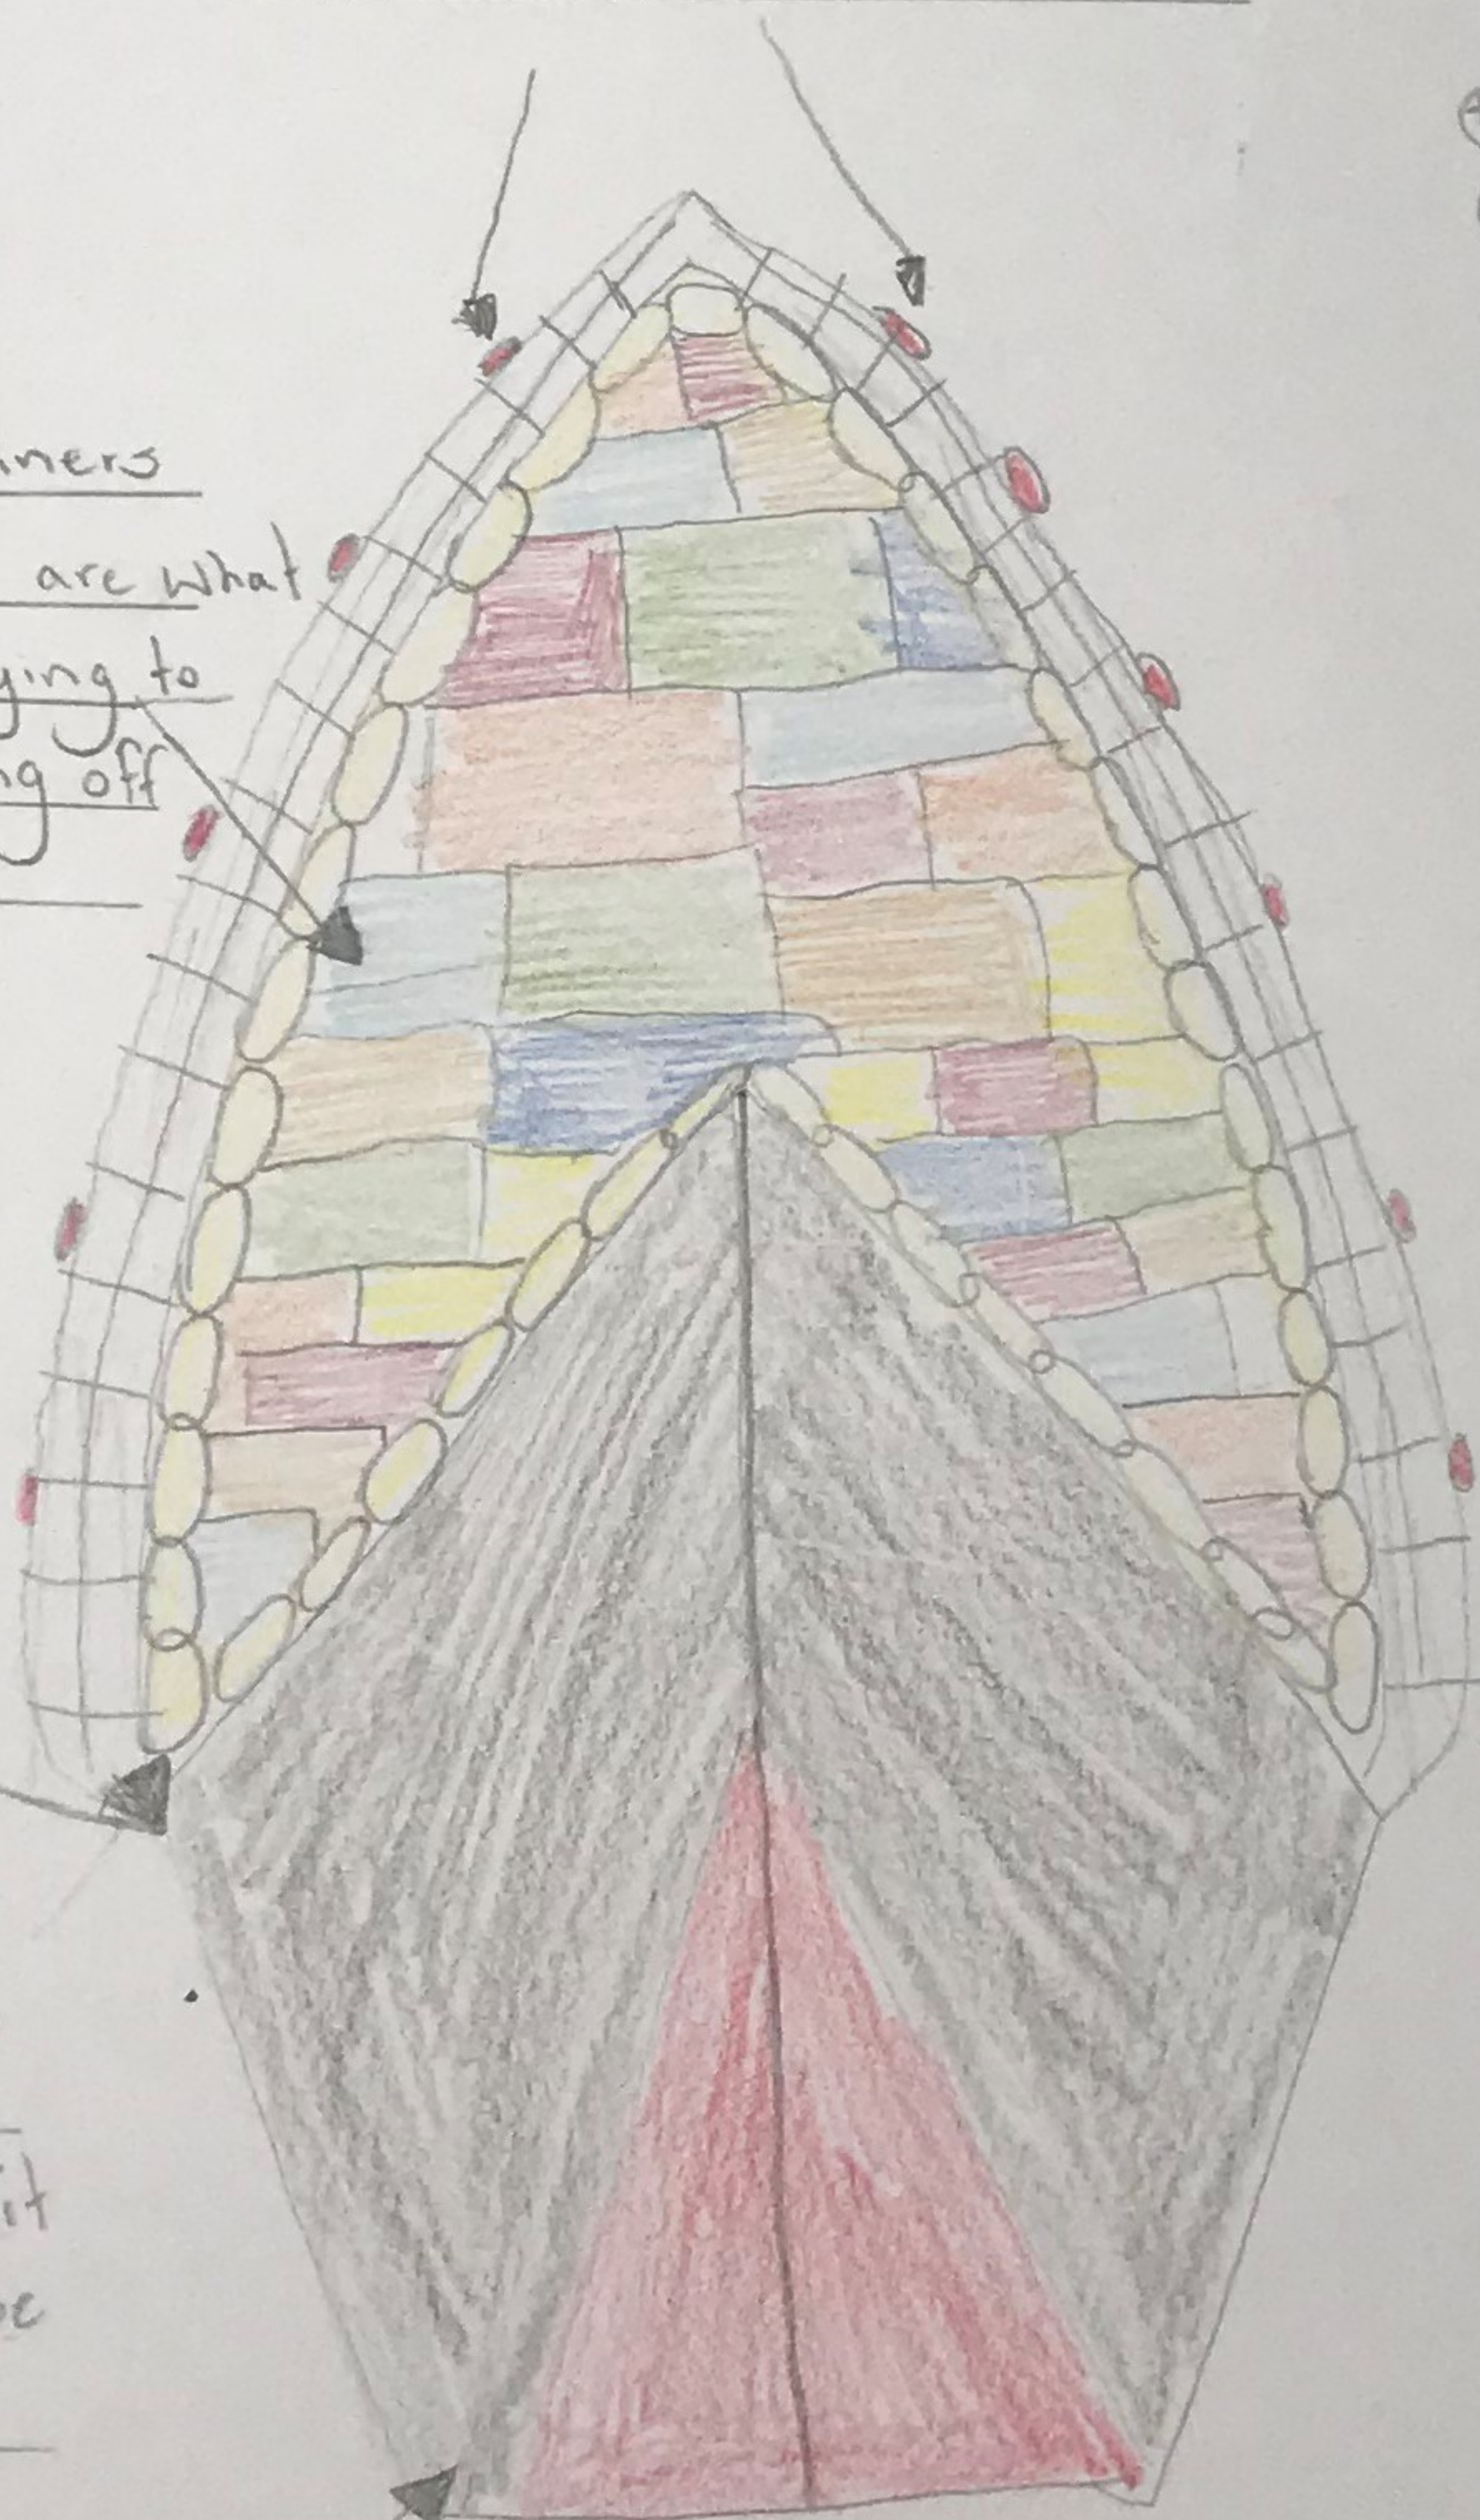

Alert

## Sponge

The sponges will prevent any of the containers from getting bumps on them. If any oil or chemicals spill, the sponges will soak it all up so there will be no more pollution!

## The Ship

The ship is the main part of the whole design. It holds everything together.

## Drones

The drones will tell if there is a leak or not. As well as the sensors they also send an alert to the captain.

## Metal Brace

The metal braces prevent the containers from falling off the ships. It also stops the sponges from falling off too. It support the whole ship.
